@NBARBETTINI
@OKTADEV

Identity use cases (circa 2007)

- Simple login – forms and cookies
- Single sign-on across sites – SAML
- Mobile app login – ???
- Delegated authorization – ???

Don't do it this way!

Are your friends already on Yelp?

Many of your friends may already be here, now you can find out. Just log in and we'll display all your contacts, and you can select which ones to invite! And don't worry, we don't keep your email password or your friends' addresses. We loathe spam, too.

Your Email Service

Your Email Address

(e.g. bob@gmail.com)

Your Gmail Password

(The password you use to log into your Gmail email)

[Skip this step](#)

Check Contacts

Don't do it this way!

Step 1
Find Friends

Step 2
Profile Information

Step 3
Profile Picture

Are your friends already on Facebook?

Many of your friends may already be here. Searching your email account is the fastest way to find your friends on Facebook.

 Gmail

Your Email:

Email Password:

Find Friends

 Facebook will not store your password.

 Other Email Service

Find Friends

The delegated authorization problem

HOW CAN I LET A WEBSITE ACCESS MY DATA
(WITHOUT GIVING IT MY PASSWORD)?

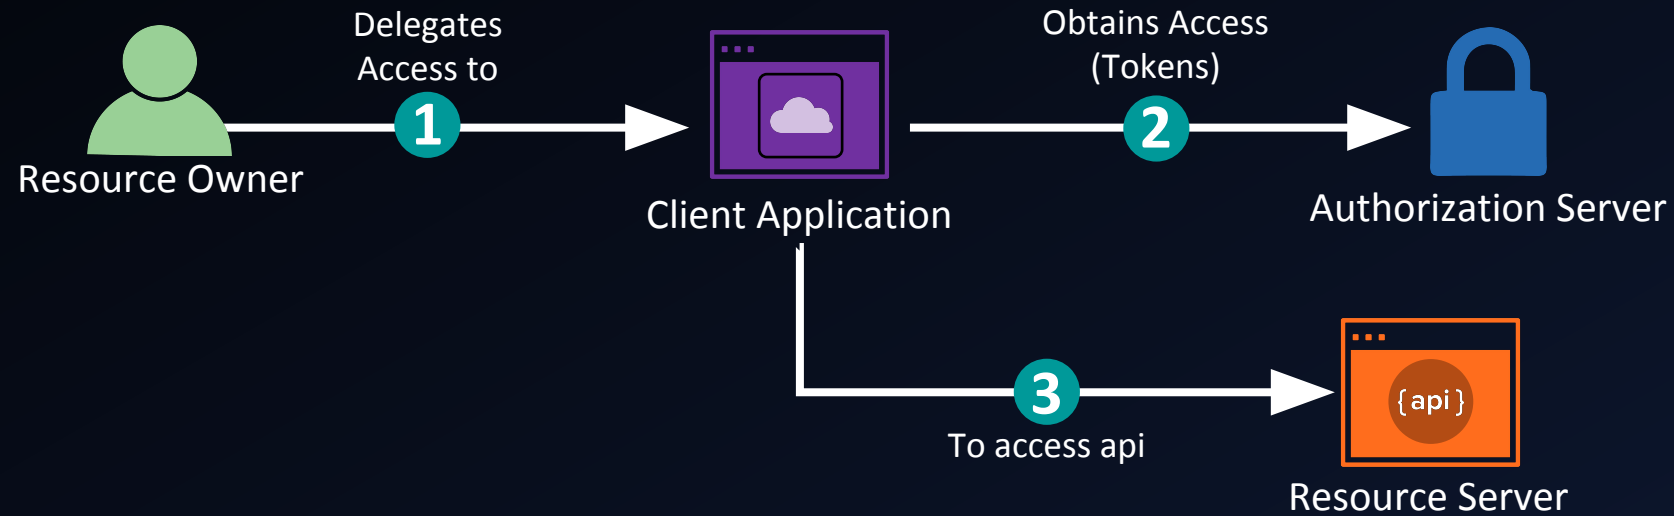

A lot of confusion around OAuth & OIDC

- × Terminology and jargon
- × Incorrect advice
- × To understand OpenID Connect, you need to learn first about OAuth
- × Hard to find a life-like example

OAuth – A real world example: Hotel Analogy

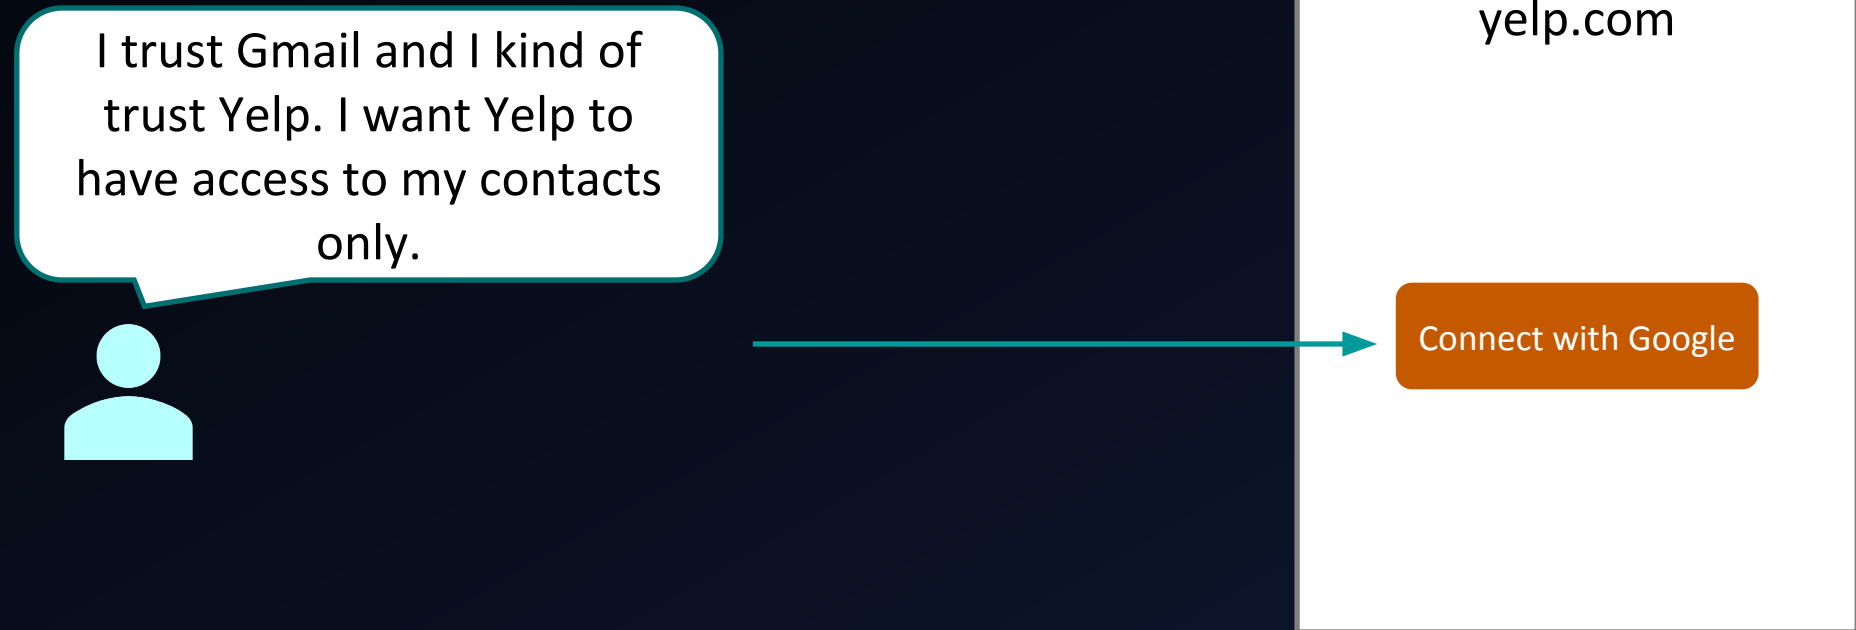

OAuth: App Scenario

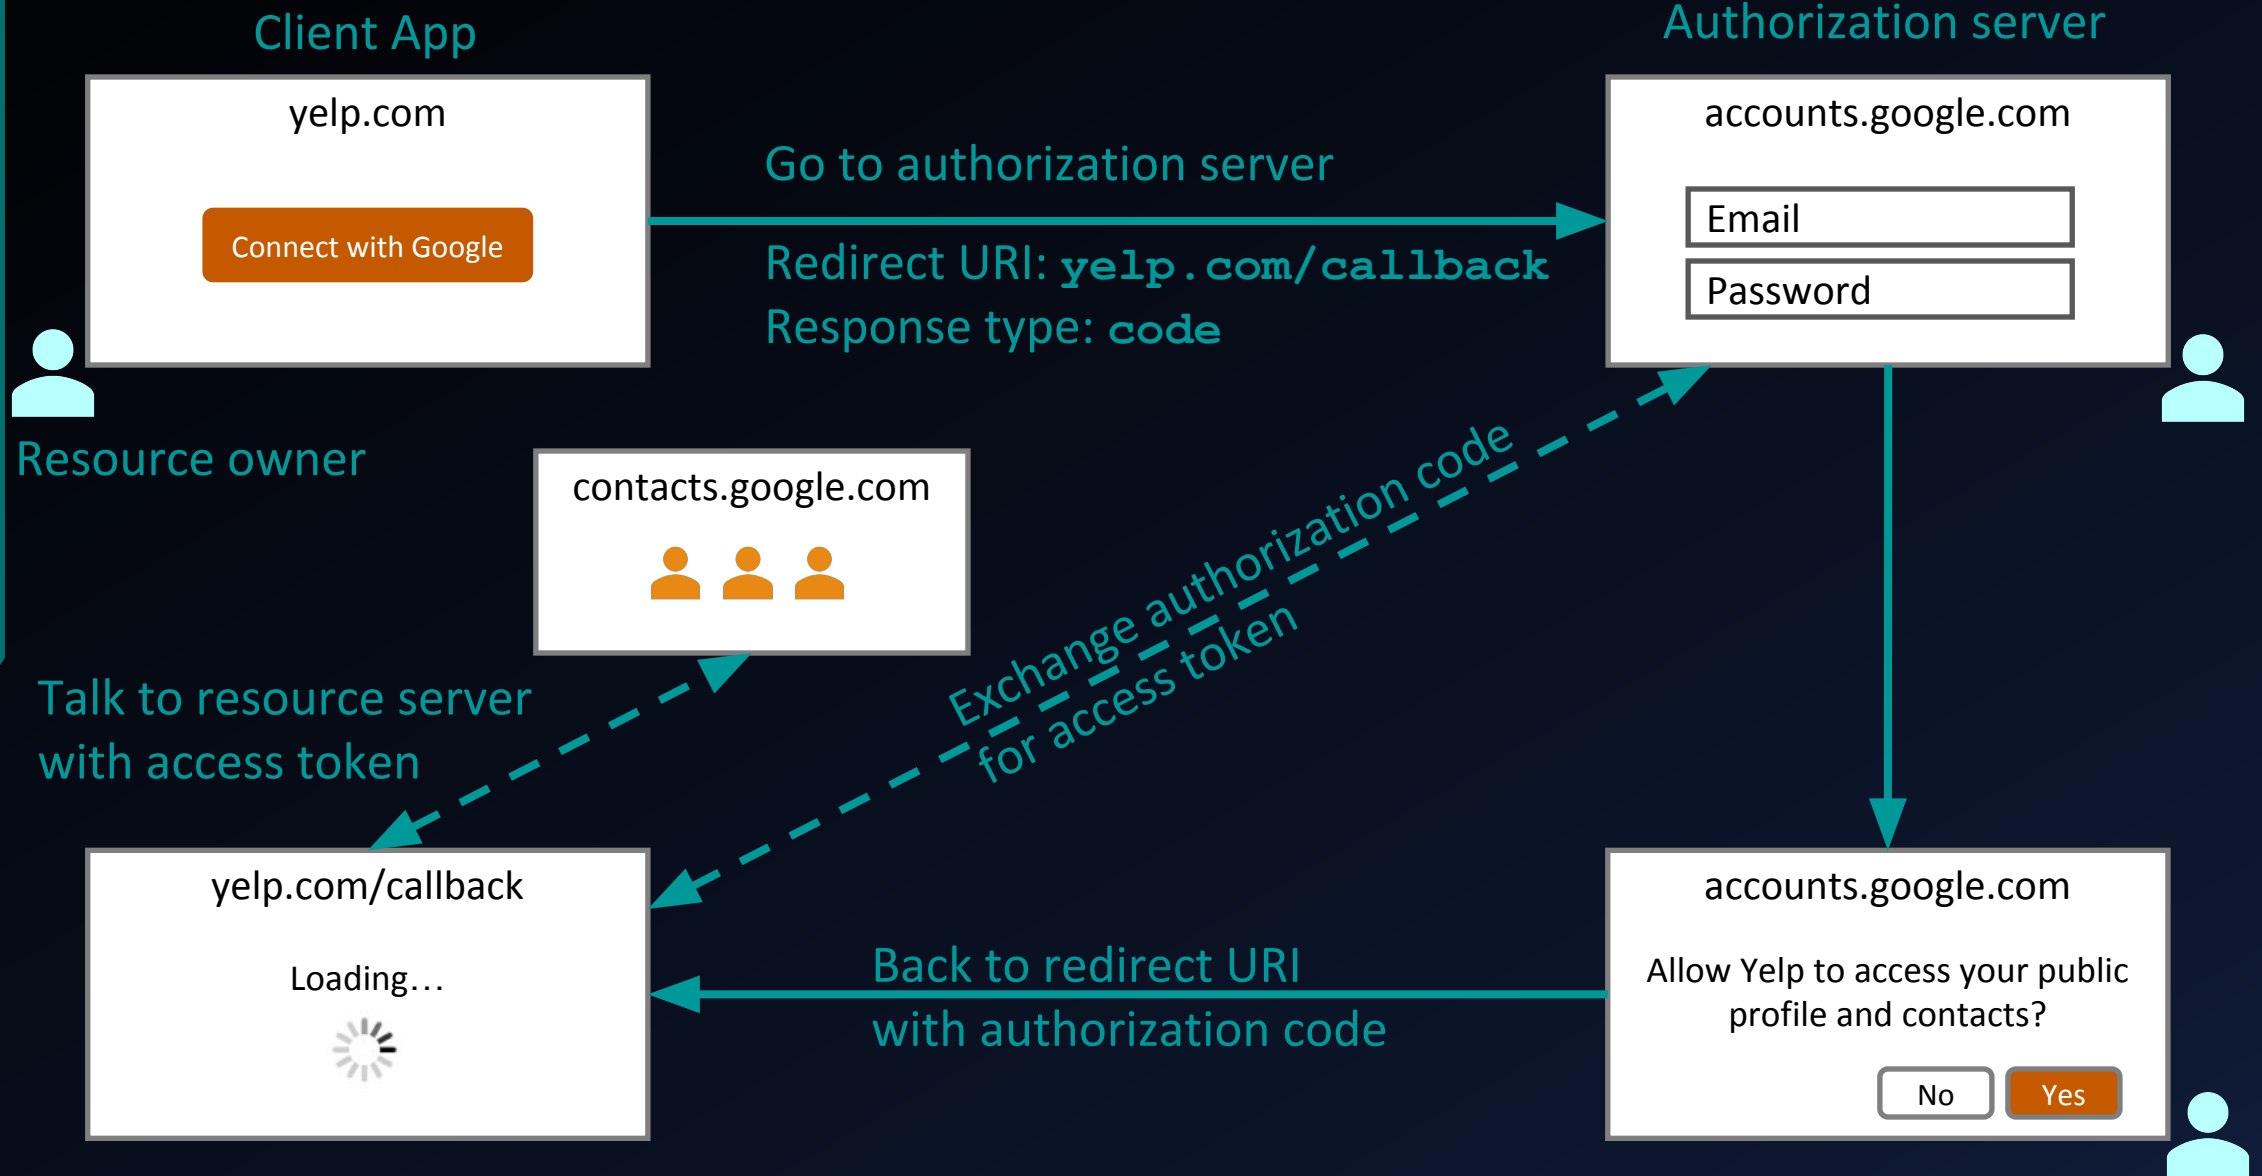

OAuth 2.0 Terminology

Hotel	App	OAuth	Description
Hotel Manager	End User	Resource Owner	Wants a Client App to do something on their behalf
Repair Person	Yelp	Client Application	Needs authorization to interact with an API on behalf of a user
Hotel Receptionist	Google	Authorization Server	Grants access (in the form of tokens) to an app
Hotel Rooms	Google Contacts API	Resource Server	Has an API that a an app can use if presented with a token

Delegated authorization with OAuth 2.0

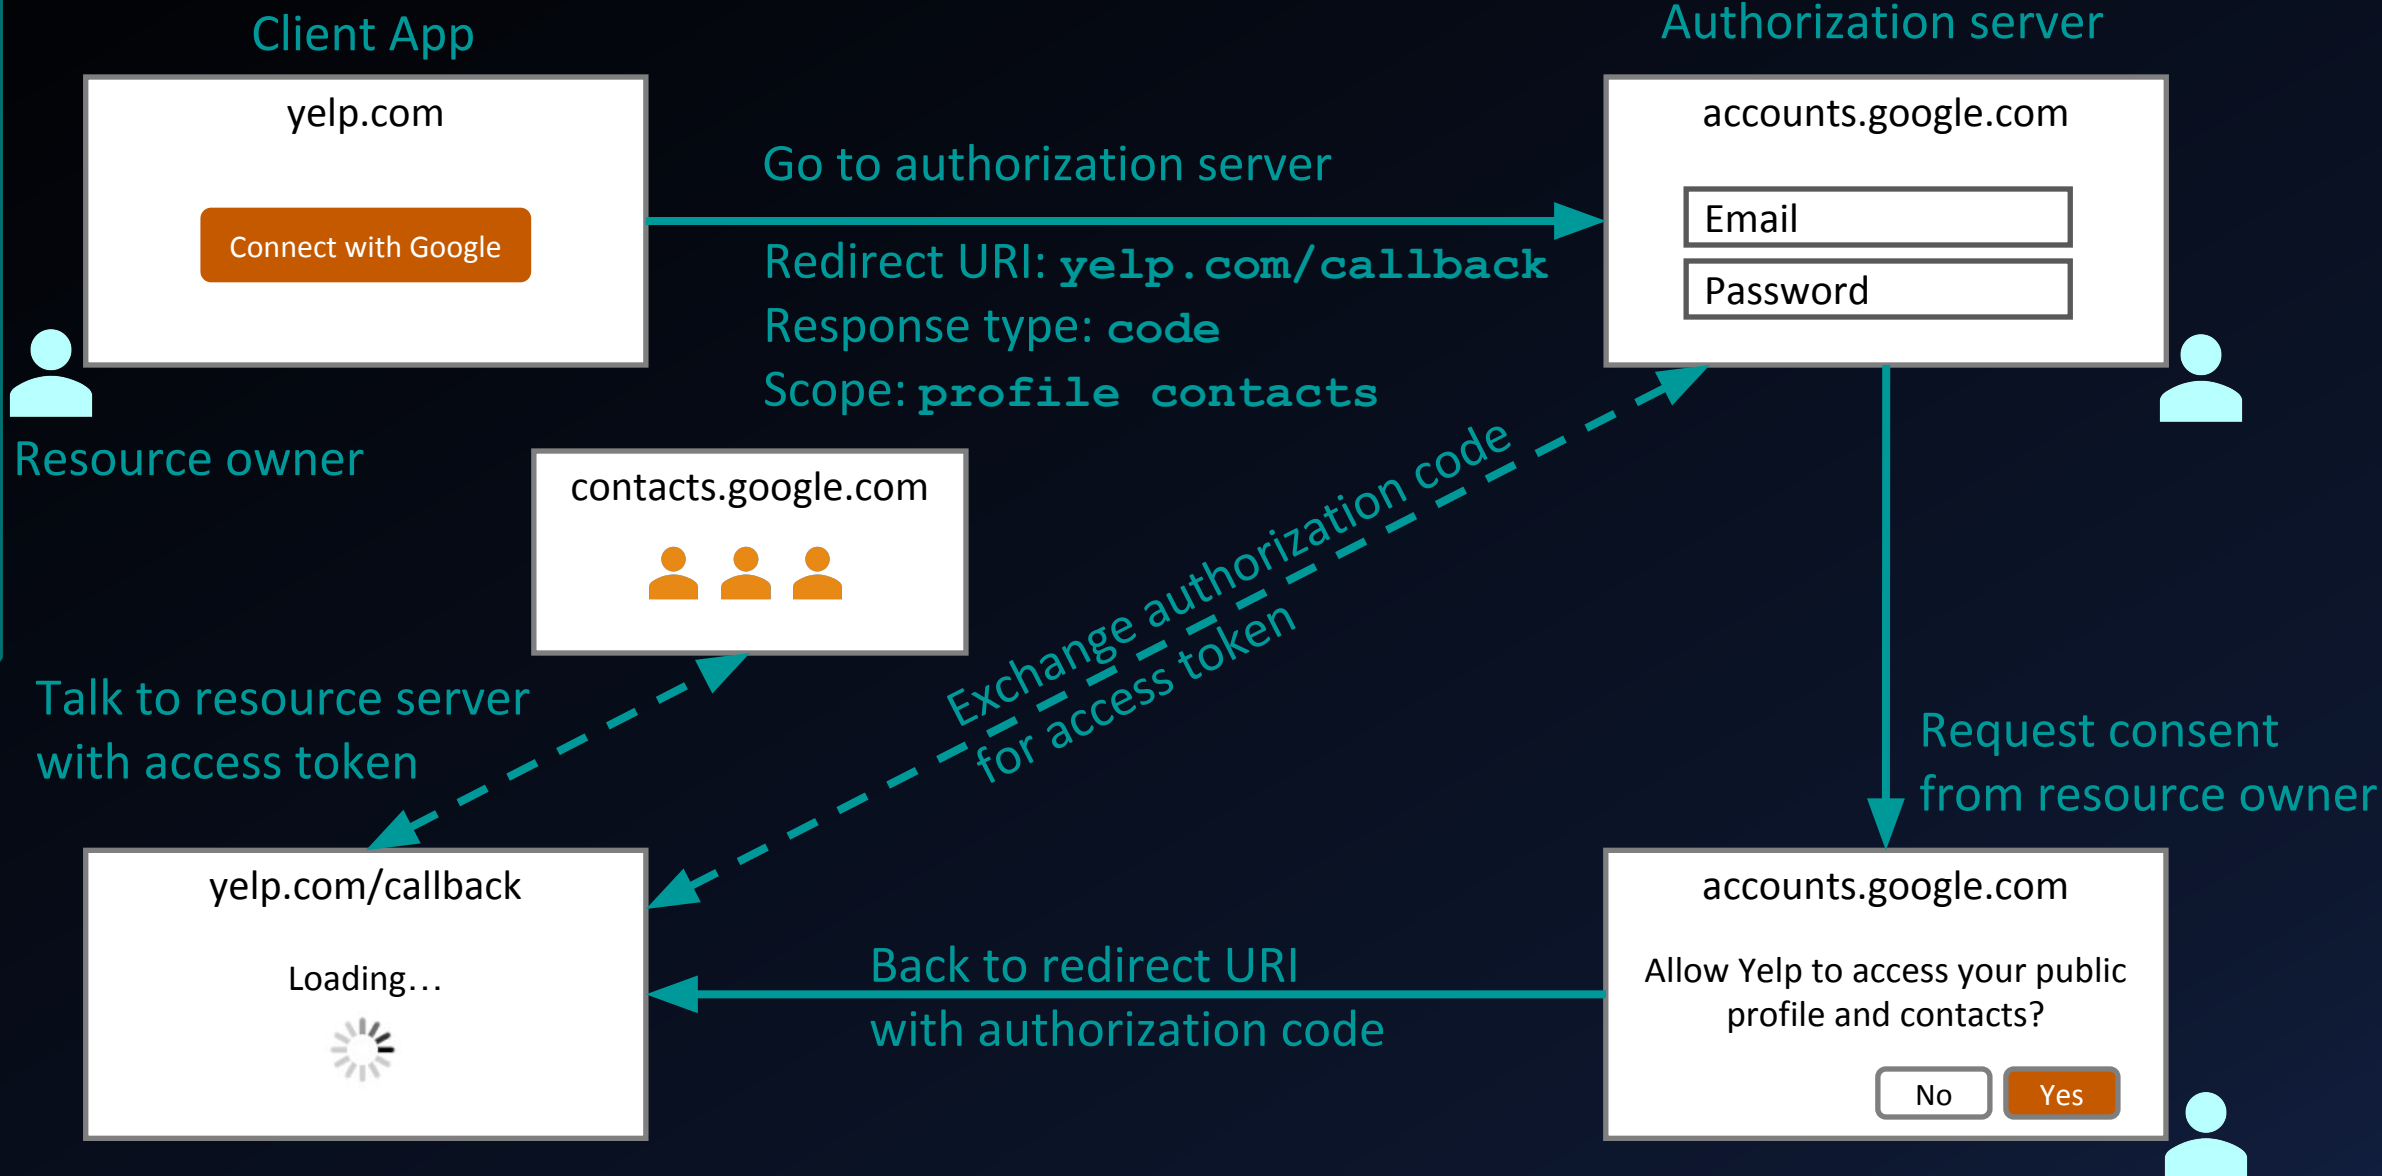

OAuth 2.0 authorization code flow

More OAuth 2.0 terminology

- Scope
- Consent

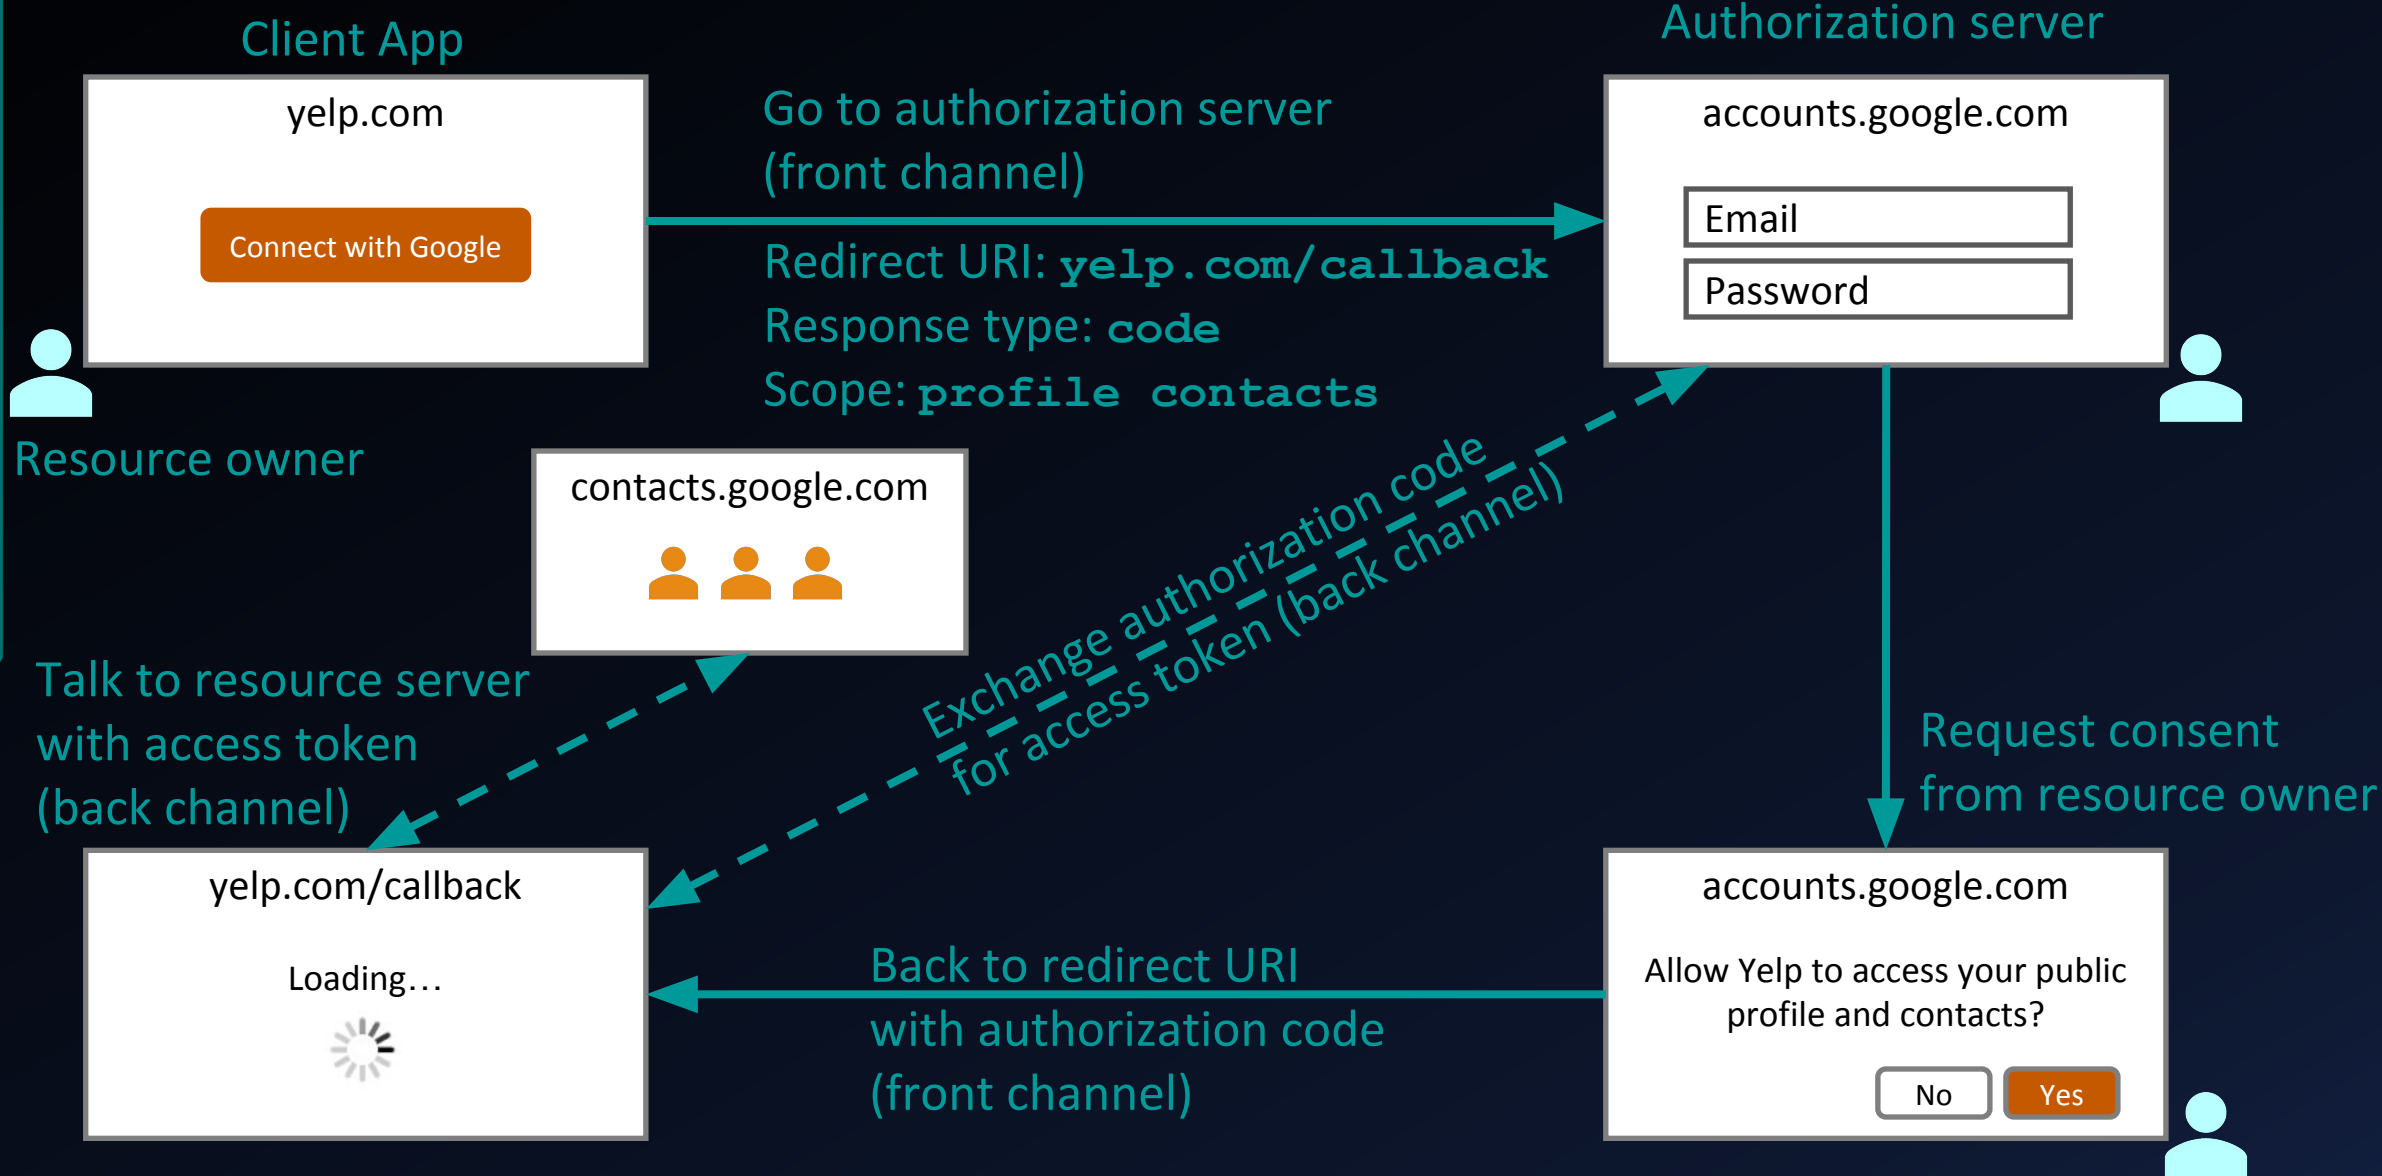

OAuth 2.0 authorization code flow

Even more OAuth 2.0 terminology

- Back channel (highly secure channel)
- Front channel (less secure channel)

OAuth 2.0 authorization code flow

Starting the flow

```
https://accounts.google.com/o/oauth2/v2/auth?  
  client_id=abc123&  
  redirect_uri=https://yelp.com/callback&  
  scope=profile&  
  response_type=code&  
  state=foobar
```

Calling back

```
https://yelp.com/callback?  
error=access_denied&  
error_description=The user did not consent.
```

```
https://yelp.com/callback?  
code=oMsCeLvIaQm6bTrgtp7&  
state=foobar
```

Exchange code for an access token

```
POST www.googleapis.com/oauth2/v4/token
Content-Type: application/x-www-form-urlencoded

code=oMsCeLvIaQm6bTrgtp7&
client_id=abc123&
client_secret=secret123&
grant_type=authorization_code
```

Authorization server returns an access token

```
{  
  "access_token": "fFAGRNJru1FTz70BzhT3Zg",  
  "expires_in": 3920,  
  "token_type": "Bearer",  
}
```

Use the access token

GET `api.google.com/some/endpoint`

Authorization: Bearer `fFAGRNJru1FTz70BzhT3Zg`

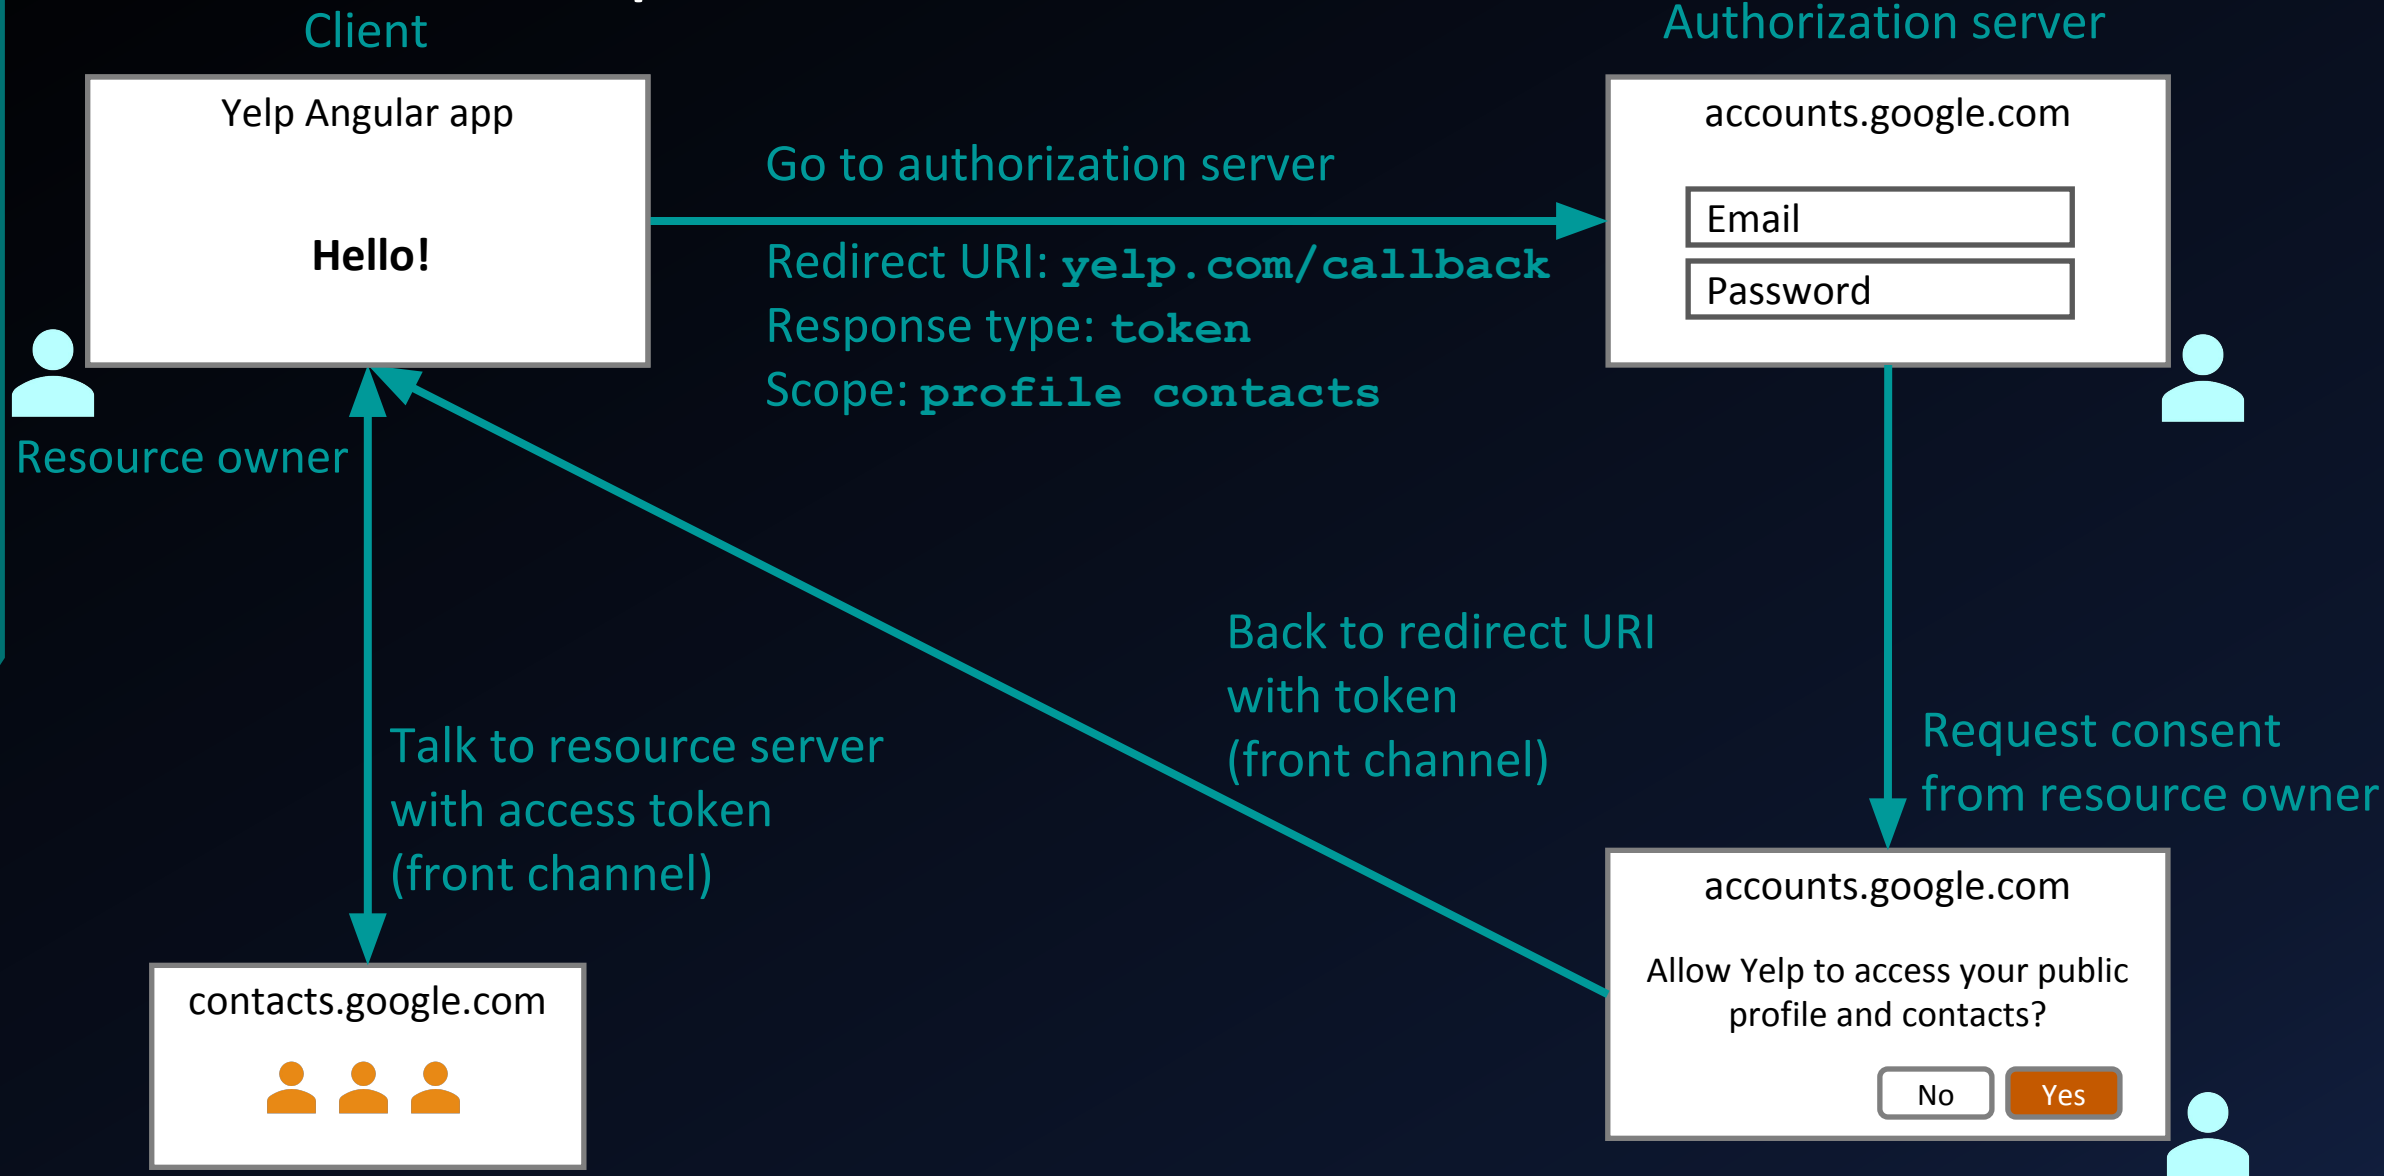

- Validate token
- Use token scope for authorization

OAuth 2.0 flows

- Authorization code (front channel + back channel)
- Authorization code w/ PKCE (front channel only)*
- Implicit (front channel only)
- Resource owner password (back channel only)
- Client credentials (back channel only)

OAuth 2.0 implicit flow

Identity use cases (circa 2012)

- Simple login – OAuth 2.0
- Single sign-on across sites – OAuth 2.0
- Mobile app login – OAuth 2.0
- Delegated authorization – OAuth 2.0

Authentication

Authentication

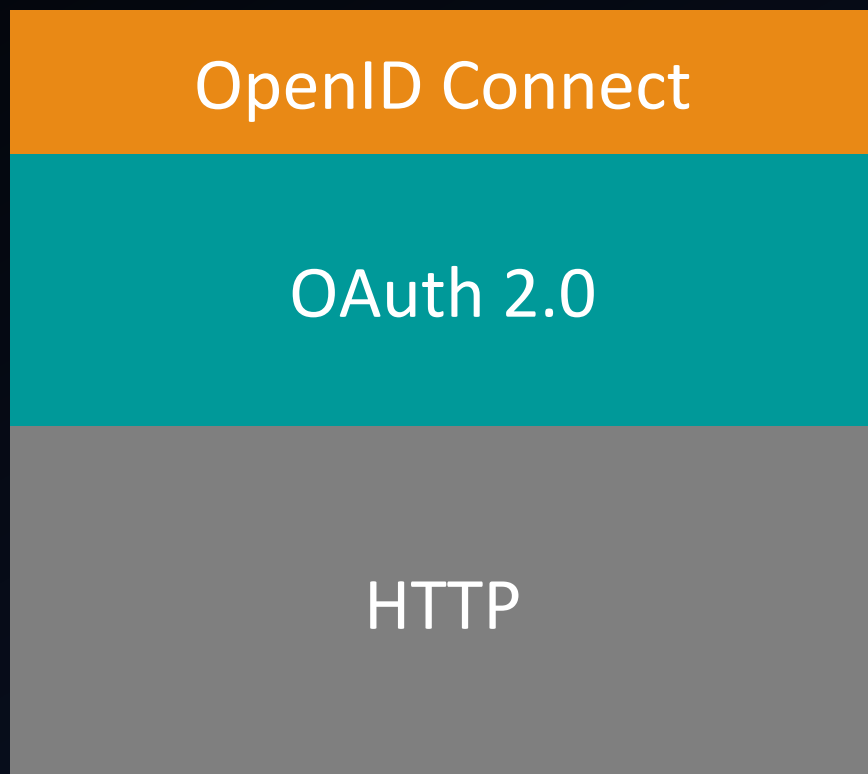

Authentication

Authorization

Problems with OAuth 2.0 for **authentication**

- No standard way to get the user's information
- Every implementation is a little different
- No common set of scopes

OAuth 2.0 and OpenID Connect

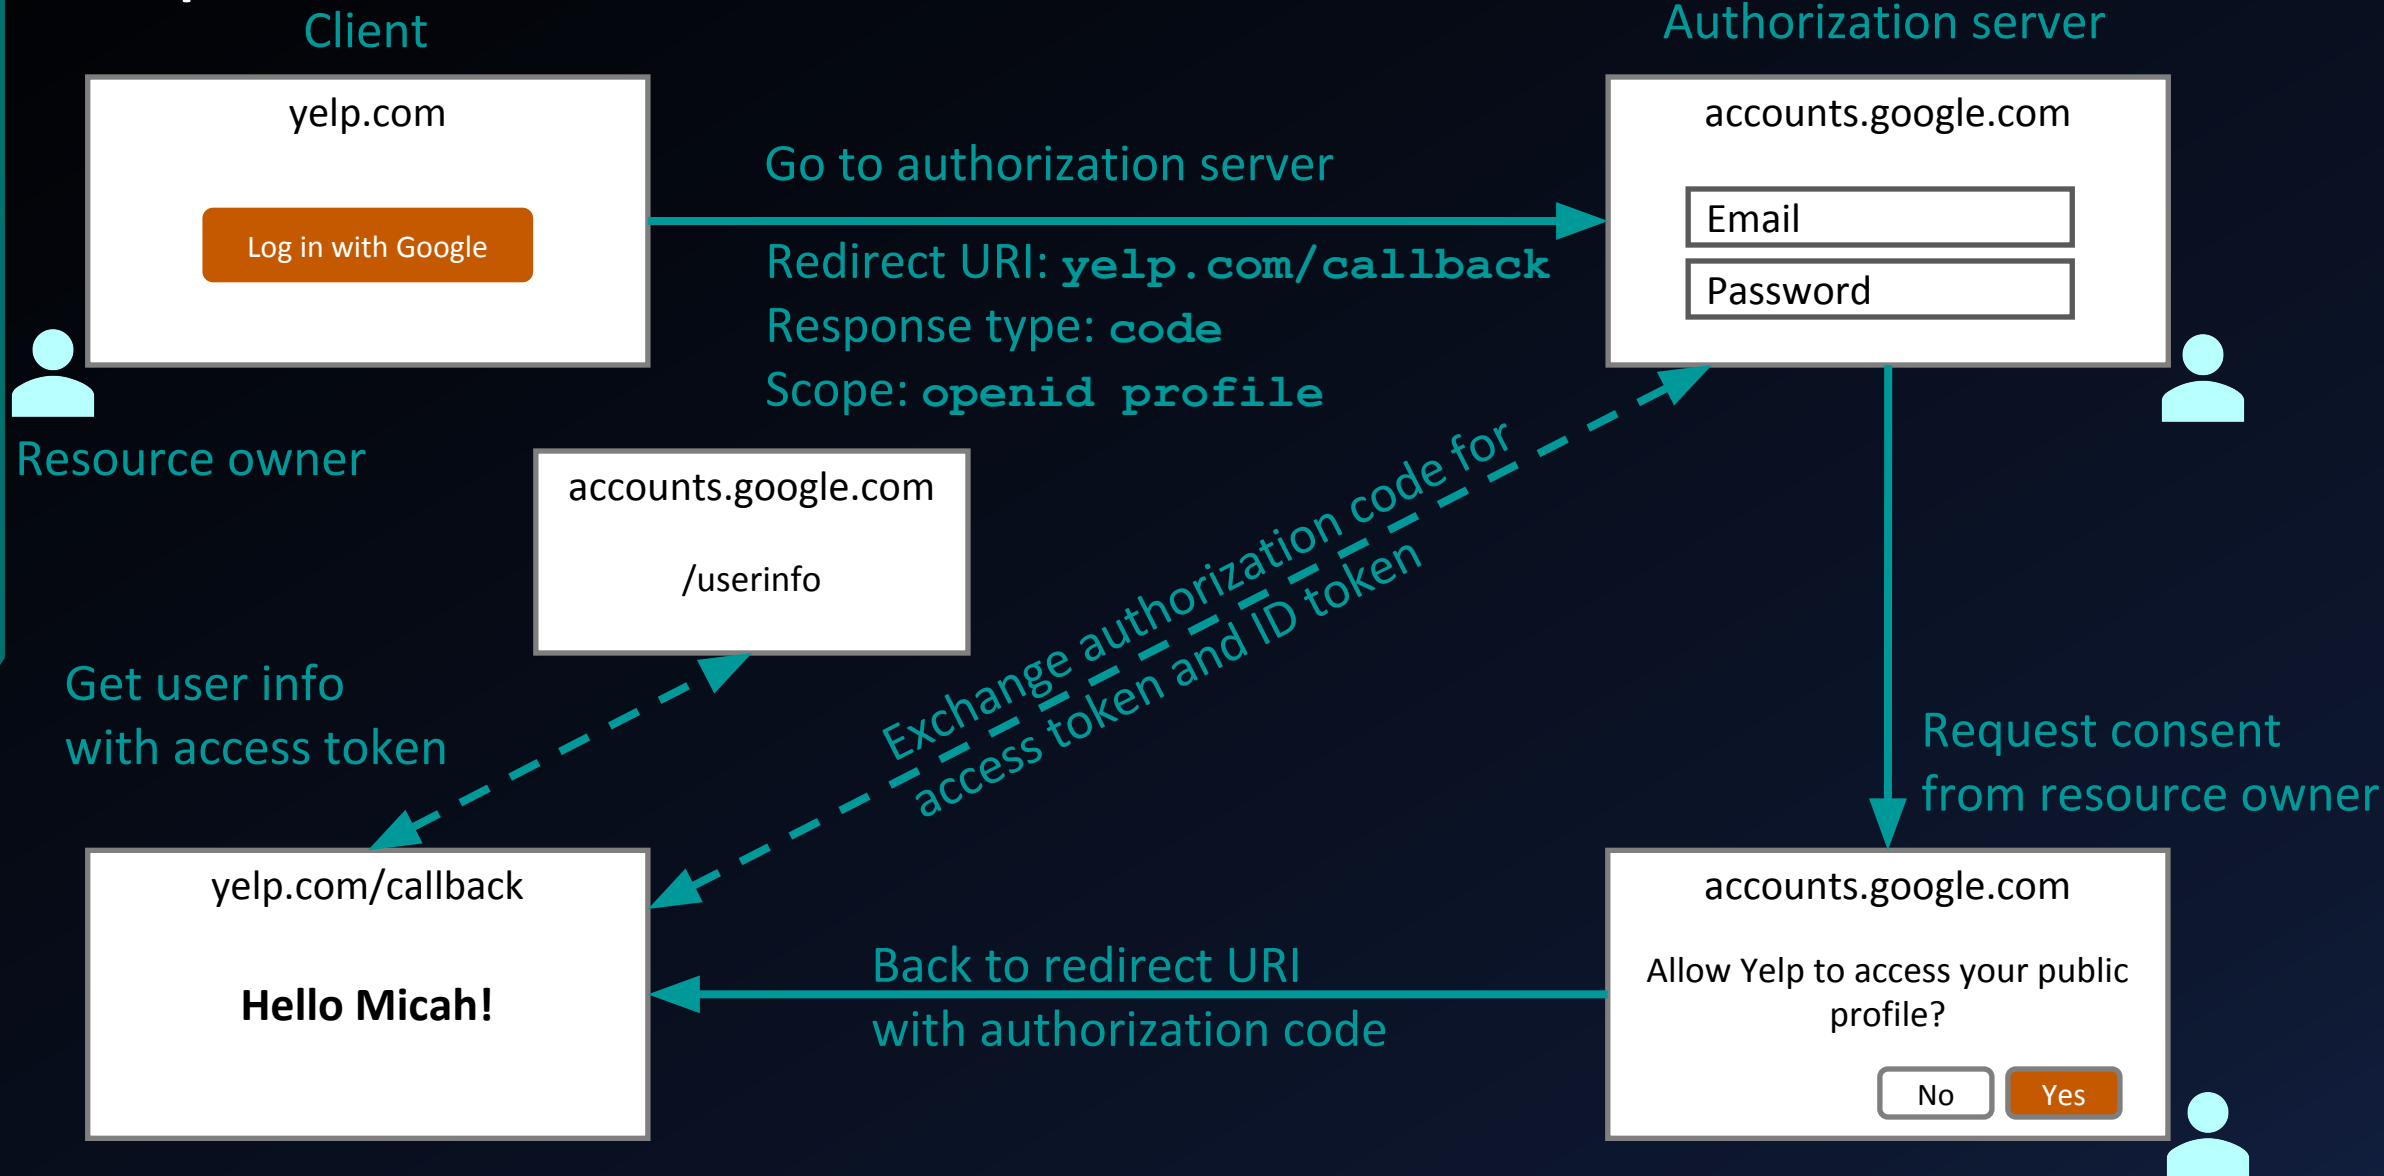

- OpenID Connect is for **authentication**
- OAuth 2.0 is for **authorization**

What OpenID Connect adds

- ID token
- /userinfo endpoint for getting more user information
- Standard set of scopes
- Standardized implementation

OpenID Connect authorization code flow

Getting the discovery document

GET <https://accounts.google.com/.well-known/openid-configuration>

```
{
  "issuer": "https://accounts.google.com",
  "authorization_endpoint": "https://accounts.google.com/o/oauth2/v2/auth",
  "token_endpoint": "https://www.googleapis.com/oauth2/v4/token",
  "userinfo_endpoint": "https://www.googleapis.com/oauth2/v3/userinfo",
  "response_types_supported": [
    "code",
    "token",
    "id_token",
    "code token",
  ],
  ...
}
```

Starting the flow

```
https://accounts.google.com/o/oauth2/v2/auth?  
  client_id=abc123&  
  redirect_uri=https://yelp.com/callback&  
  scope=openid profile&  
  response_type=code&  
  state=foobar
```

Calling back

```
https://yelp.com/callback?  
error=access_denied&  
error_description=The user did not consent.
```

```
https://yelp.com/callback?  
code=oMsCeLvIaQm6bTrgtp7&  
state=foobar
```

Exchange code for access token and ID token

POST `www.googleapis.com/oauth2/v4/token`

Content-Type: `application/x-www-form-urlencoded`

`code=oMsCeLvIaQm6bTrgtp7&`

`client_id=abc123&`

`client_secret=secret123&`

`grant_type=authorization_code`

Authorization server returns access and ID tokens

```
{  
  "access_token": "fFAGRNJru1FTz70BzhT3Zg",  
  "id_token": "eyJraB03ds3F...",  
  "expires_in": 3920,  
  "token_type": "Bearer",  
}
```

ID token (JWT)

Header

eyJzdWIiOiIwMHU5bzFuaWtqdG9CZzVabzBoNyIsInZlciI6MSwiaXNzIjoi

Signature

The ID token (JWT)

(Header)

```
.  
{  
  "iss": "https://accounts.google.com",  
  "sub": "micah.silverman@okta.com",  
  "name": "Micah Silverman"  
  "aud": "s6BhdRkqt3",  
  "exp": 1311281970,  
  "iat": 1311280970,  
  "auth_time": 1311280969,  
}
```

.
(Signature)

Calling the userinfo endpoint

GET `www.googleapis.com/oauth2/v4/userinfo`

Authorization: Bearer `fFAGRNJru1FTz70BzhT3Zg`

200 OK

Content-Type: `application/json`

```
{
  "sub": "you@gmail.com",
  "name": "Nate Barbettini"
  "profile_picture": "http://plus.g.co/123"
}
```

Identity use cases (today)

- Simple login – OpenID Connect Authentication
- Single sign-on across sites – OpenID Connect Authentication
- Mobile app login – OpenID Connect Authentication
- Delegated authorization – OAuth 2.0 Authorization

OAuth and OpenID Connect

Use OAuth 2.0 for:

- Granting access to your API
- Getting access to user data in other systems

(Authorization)

Use OpenID Connect for:

- Logging the user in
- Making your accounts available in other systems

(Authentication)

Which flow (grant type) do I use?

- Web application w/ server backend: **authorization code flow**
- Native or mobile app: **authorization code with PKCE flow**
- JavaScript app (SPA) w/ API backend:
 - **authorization code with PKCE flow (if you can)**
 - **implicit flow (if you must)**
- Microservices and APIs: **client credentials flow**

Authorization Code with PKCE Flow (Part 1)

Authorization Code with PKCE Flow (Part 2)

Token validation

- The fast way: local validation
 - Validate cryptographic signature
 - Check expiration timestamp
- The strong way: introspection

Thanks y'all!
